Projects

UVS Cygnus

A library and deckbuilding tool for the trading card game Universus.

UVS Cygnus is a full-stack MERN (MongoDB, Express, React, Node) application with some frontend tools to manage the cards and users in the database. All CRUD functionality is available. Currently, the website is still under construction, and new features are being added. It has basic functionality with its search engine and deck-building tools, along with login and registration.
